### Installation Instructions

The Multi-Ad Creator2 Updater searches your drive for a Creator2 1.1, Creator2 1.1.1, Creator2 1.1.2 or Creator2 1.1.3 application it can update. Once an application(s) is found, you are asked to verify the version you wish to update. After this is finished, you will notice your Creator application is changed to Multi-Ad Creator2 1.1.4.

Please keep the Creator2 1.1.4 updater with your Creator2 full installer. If you ever need to re-install Creator2, you will have it available.

### What has been updated in 1.1.4

This version corrects an NT server problem. Occasionally graphic files placed on an NT server are substituted with different graphic files. The 1.1.4 workaround fixes this external error.

Please keep the Creator2 1.1.3 updater with your Creator2 full installer. If you ever need to re-install Creator2, you will have it available.

### What has been updated in 1.1.3

When LaserWriter 7.x was active, a previously printed file could crash while being opened. This problem is now solved.

Using an Epson printer driver no longer causes thousands of Creator2 copies to be printed.

The "end of file" error caused by printing a Helios 2.0 OPI created Low Res EPS file to a LaserWriter is fixed.

This Creator2 version eliminates a ruler redraw problem with System 8.5. This problem occurred when one or more document elements were selected and a palette overlapped the document's window. If another application was placed in front of Creator2, our document's rulers would redraw over this application.

## What has been updated in 1.1.2

Creator2 1.1.2 is compatible with Mac OS System 8.5. Increasing its compatibility, Creator2 1.1.2 works with systems ranging from 7.5.3 through 8.5.

CIF documents opened in Creator2 1.1.2 have correct vertical offset and accurate tab leaders.

## What has been updated in 1.1.1

CIF documents opened in Creator2 1.1.1 choose the correct font (when available) instead of Geneva.

Creator2 can now be used with Font Reserve<sup>a</sup>.

Creator2 handles "Missing Graphics" better. Creator2 mounts missing volumes, remembers previously selected folders and automatically locates the graphic when removable media is mounted.

It is now faster to delete files from the Files Palette that originate on an unmounted server.

Pasting text after quitting and relaunching Creator2 works correctly.

Copy/Paste of text on International Mac OS versions is now accurate.

Em, En and Thin spaces no longer force a wrap to the next line.

EPS files placed into Creator2 that contain an embedded Photoshop EPS file now print.

Creator2 composite EPS files containing gradients that use spot colors now separate and print correctly.

EPS files that have a different size preview than the PostScript bounding box view and print correctly.

Documents print correctly that use both landscape printing and resolution limiting.

Documents open that have a page(s) with a textured frame.

Undo/Redo are not allowed while a path is being created. These commands can be used when reshaping the path.

It now works to change an element's frame type to plain when it has a custom frame type element style.

## **Our PostScript comments are enhanced:**

The DocumentData comment correctly reflects that enclosed fonts include binary data.

Fonts included in EPS files are surrounded by BeginResource and EndResource comments.

The terminating EndData after Photoshop EPS files is written correctly.
