Clicking Through Selection to Next Element

Created
2/19/2002

Discussion

Product
Creator 6

Creator 6 uses a new method of clicking through a selection to the next element. In Creator 3.6–4.0.5 and Creator2, you Command-click. In Creator 6, you hold down the mouse button and press Tab.

Platforms
Mac OS 9
Mac OS X

Windows 98,
ME, 2000, XP

To click through selection to next element:

1. Select the Arrow, Containment, Rotate, Skew, or Flip tool.
2. Position the pointer on top of two or more elements. All elements must be under the pointer.
3. Hold down the mouse button, and press Tab to select the element under the frontmost element. The next press of the Tab key selects the next deepest element. Continued pressing of the Tab key eventually selects the deepest element.
