## Fonts Supported in Creator 6

### Discussion

The following fonts are supported in Creator 6:

- Type 1 PostScript
- TrueType
- OpenType (Windows only and with the .ttf extension but not the .otf extension)

#### Notes for Creator 6 Macintosh

In Mac OS 9, there is an extension called Type 1 Scaler. If this extension has been removed or disabled, you will not be able to see Type 1 fonts.

In Mac OS X, you can put extensions at the end of fonts. Mac OS X should be able to read fonts coming from all other platforms.

#### Note for Creator 6 Windows

Accessing the special characters in OpenType fonts requires the use of the Character Map system utility or its equivalent.

#### Fonts Not Supported in Creator 6

- TrueType Collections in Creator 6 Windows
- OpenType in Creator 6 Macintosh
- GX Enabled Type 1
- GX
- GX-specific features in GXified TrueType
- Multiple Master
- Bitmap only
